- GitLab: <https://gitlab.com/justyntemme>

Skillset

- DevSecOps
- Strong background in both open source and enterprise software engineering
- Focus on scalable Golang-based microservices
- Expertise demonstrated through contributions to Docker and Golang
- Valuable asset in any cloud environment
- Proven track record of leading teams and mentoring junior developers
- Committed to ensuring security is always top-of-mind in all aspects of software development.
- Proficient in containerization technologies such as Docker and Kubernetes

Work History

Dirishti

DevSecOps Engineer Oct 2022 - Dec 2022

- Streamlined Dockerfiles using multi-stage builds to decrease build times by 70% and speed up time to delivery.
- Integrated kubeflow with MLOps CI/CD pipelines for training data.
- Deployed microservices in a cloud agnostic solution to GCP.

Pylons

DevOps Engineer Jan 2022 - Nov 2022

- Built CI\CD pipelines to deploy Golang-based microservices in a cloud kubernetes environment hosted on GCP.
- Utilized prometheus monitoring to detect downtime and errors.
- Built dashboards in Grafana to better understand usage and traffic load.
- Secured application development environment using RBAC to promote release candidates from a pre-prod environment to production.
- Reviewed code and mentored developers to ensure security was a primary concern.
- Created terraform scripts to ensure rapid redeployment of production environment in case of a GCP outage in a specific region.
- Architect cloud solutions and built out kubernetes environments.

Centene

Application Software Engineer (Golang) Aug 2020 - Oct 2021

- Built scalable Golang-based microservices with thousands of API calls a minute in a high-availability clustered environment.
- Created CI/CD pipeline using RBAC to promote release candidates from a pre-prod environment to production.
- Monitored applications for downtime using prometheus and grafana.
- Utilized kafka to replace batch processing hydration services with streaming technology.
- Led a team of Golang developers to plan sprints and meet product owner requirements within the required deadline.
- Automated test suites to ensure healthy deployments that had the

ability to rollback on failure.

- Utilized horizontal pod autoscaling in helm charts for availability at scale.
- Created Geospatial queries in mongoDB aggregation pipelines ensuring performant queries with response times within SLA's.
- Migrated deployment pipelines from Jenkins to Gitlab.

Linkedin Learning

Golang consultant Aug 2021 - Oct 2021

- Work with an international team to review high quality questions, in the field of go lang, for students taking the course assessment.

Apple / Amarda Group

Application Software Engineer (Golang) March 2019 - Oct 2020

- Created documentation for internal applications.
- Created automated pipeline for creating documentation from markdown.
- Utilized Hugo and go lang to create documentation engines to be used around the organization.

Vertical Ops

Backend Application Developer (Golang) Dec 2018 - Feb 2019

- Developed back end services in Golang using GORM.
- Create queries in postgres for RETFUL queries
- Review frontend/backend code from developers

Smash Dev Shop

Backend Web Developer Sept 2018 - Nov 2018

- Assisted with website migrations from legacy versions of Apache & Linux.
- Developed new websites using Laravel and Docker.
- Worked heavily with Laradock, VueJS.

- Created utility and upkeep scripts to perform tasks such as automatic AWS backup and recovery of all databases and web directories.

Technical Support Specialist, RSM Marketing Services

Technical Support Specialist

Oct 2017 - Aug 2018

- Worked directly with clients to meet, take requests, train
- Worked directly with clients to meet, take requests, train in WordPress, discuss project status.
- Resolved email server issues.
- Managed and changed DNS configurations, and more.
- Performed and reported on security audits.
- Various CentOS / WHM / cPanel server administration tasks.

NextWaveSolutions

Owner /Founder Oct 2016

- Built and maintained applications for various clients using Javascript, Golang, and PHP (WordPress).
- Admin linux (fedora) servers and ensure uptime met SLA's
- Worked with Docker, Docker Swarm, nginx
